

INTRODUCTION

Authors: **Fabricia Carpenter Soraire** and **Luna Carpenter Pires**

1. Overview

CertSigner is a digital proof-of-existence certification service created by **Fabricia Carpenter Soraire** and **Luna Carpenter Pires** (both based in Brazil) to legitimize the existence of ideas, patents, documents, works, projects, photographs, music and videos through public, immutable evidence that any third party can verify.

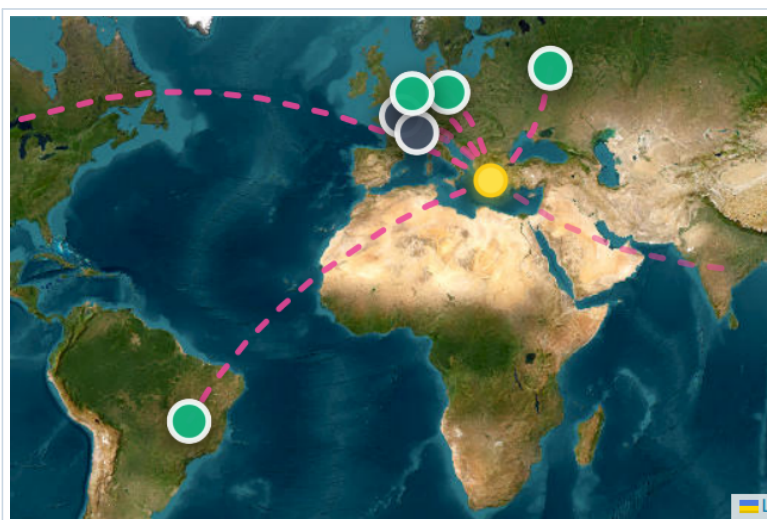

Being able to make this record in seconds, and remotely, lets authors add value to their content quickly and **WITHOUT OTHER INTERMEDIARIES**, democratizing access to reliable evidence: any creator — regardless of financial resources, geographic location or legal knowledge — can produce verifiable, lasting records of their ideas and creations, choosing between public, private or encrypted deposits.

“Every creation should be able to be documented immediately and globally, regardless of its creator’s economic situation, geographic location or legal knowledge.”

— CertSigner’s founding principle

2. How it works

1 Submit your content Text, file, image, code: the system generates a unique SHA-256 hash.	2 Choose the deposit Public, private or encrypted. You control the exposure.	3 Multi-source publication The hash is recorded in several public sources at the same time.	4 Get your receipt Certificate, verification links and continuous monitoring.
--	--	---	---

Global Activation Pattern (demo): the hash is deposited simultaneously in independent sources across several countries and continents.

Global • Verifiable • Immutable over time • Evidentiary continuity. CertSigner complements — and does not replace — patents, copyright and other formal registrations, narrowing the window of vulnerability between creation and formal protection.
